Nanofibers of Conjugated Polymers

A. Sezai Sarac

Nanofibers of Conjugated Polymers A. Sezai Sarac

Conjugated polymer composites with high dielectric constants are being developed by the electronics industry in response to the need for power-grounded decoupling to secure the integrity of high-speed signals and to reduce electromagnetic interference. Electrically conducting polymers are materials that simultaneously possess the physical and chemical properties of organic polymers and the electronic characteristics of metals. Multifunctional micro- and nanostructures of conjugated polymers, such as of pyrrole, have received great attention in recent years because they can polymerize easily and have high conductivity and good thermal stability. They, however, have some disadvantages such as brittleness and hard processability, which can be overcome by developing their nanocomposites. Nanofiber materials with different dielectric properties can be made from conjugated polymer composites and used in the electronics industry, in sensors and batteries, for electrical stimulation to enhance nerve-regeneration process, and for constructing scaffolds for nerve tissue engineering.

Electrospinning is a versatile technique that is used to produce ultrathin continuous fibers with high surface-to-volume and aspect ratios from a variety of materials, including polymers, composites, and ceramics. Conductive materials in fibrillar shape may be advantageous compared with films because of their inherent properties such as anisotropy, high surface area, and mechanical strength. They are of particular interest in electroactive composites as they can be efficiently distributed in an insulating polymer matrix to improve both electrical and mechanical properties. Combination of electrical properties with good mechanical performance is of particular interest in electroactive polymer technology.

This book covers the general aspects of electrospinning and discusses the fundamental concepts that can be used to produce nanofibers with the help of mathematical models and equations. It also details the methods through which different polymeric structures can be included in conjugated polymers during electrospinning to form composites or blends of conjugated polymer nanofibers.

From reader reviews:

Fabiola Gaylor:

The book Nanofibers of Conjugated Polymers can give more knowledge and information about everything you want. Why must we leave the great thing like a book Nanofibers of Conjugated Polymers? A number of you have a different opinion about book. But one aim that will book can give many data for us. It is absolutely proper. Right now, try to closer using your book. Knowledge or details that you take for that, you may give for each other; you may share all of these. Book Nanofibers of Conjugated Polymers has simple shape but the truth is know: it has great and massive function for you. You can look the enormous world by open and read a reserve. So it is very wonderful.

Marquita Oswald:

This Nanofibers of Conjugated Polymers usually are reliable for you who want to be a successful person, why. The key reason why of this Nanofibers of Conjugated Polymers can be on the list of great books you must have will be giving you more than just simple examining food but feed a person with information that might be will shock your preceding knowledge. This book is actually handy, you can bring it all over the place and whenever your conditions both in e-book and printed versions. Beside that this Nanofibers of Conjugated Polymers forcing you to have an enormous of experience like rich vocabulary, giving you trial of critical thinking that we understand it useful in your day pastime. So , let's have it and enjoy reading.

Thomas White:

This Nanofibers of Conjugated Polymers is fresh way for you who has attention to look for some information as it relief your hunger of knowledge. Getting deeper you on it getting knowledge more you know or you who still having little bit of digest in reading this Nanofibers of Conjugated Polymers can be the light food for you because the information inside this particular book is easy to get by anyone. These books develop itself in the form which is reachable by anyone, yes I mean in the e-book form. People who think that in guide form make them feel sleepy even dizzy this guide is the answer. So there is absolutely no in reading a guide especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss this! Just read this e-book sort for your better life in addition to knowledge.

Steven Evans:

As a university student exactly feel bored to reading. If their teacher requested them to go to the library or make summary for some reserve, they are complained. Just tiny students that has reading's soul or real their passion. They just do what the trainer want, like asked to the library. They go to right now there but nothing reading significantly. Any students feel that reading through is not important, boring and can't see colorful pictures on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore , this Nanofibers of Conjugated Polymers can make you sense more interested to read.
