Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35)

Paul Kirk James F. Davis

Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) Paul Kirk James F. Davis The amount of algebraic topology a graduate student specializing in topology must learn can be intimidating. Moreover, by their second year of graduate studies, students must make the transition from understanding simple proofs line-by-line to understanding the overall structure of proofs of difficult theorems. To help students make this transition, the material in this book is presented in an increasingly sophisticated manner. It is intended to bridge the gap between algebraic and geometric topology, both by providing the algebraic tools that a geometric topologist needs and by concentrating on those areas of algebraic topology that are geometrically motivated. Prerequisites for using this book include basic set-theoretic topology, the definition of CW-complexes, some knowledge of the fundamental group/covering space theory, and the construction of singular homology. Most of this material is briefly reviewed at the beginning of the book. The topics discussed by the authors include typical material for first- and second-year graduate courses. The core of the exposition consists of chapters on homotopy groups and on spectral sequences. There is also material that would interest students of geometric topology (homology with local coefficients and obstruction theory) and algebraic topology (spectra and generalized homology), as well as preparation for more advanced topics such as algebraic K-theory and the s-cobordism theorem. A unique feature of the book is the inclusion, at the end of each chapter, of several projects that require students to present proofs of substantial theorems and to write notes accompanying their explanations. Working on these projects allows students to grapple with the "big picture", teaches them how to give mathematical lectures, and prepares them for participating in research seminars. The book is designed as a textbook for graduate students studying algebraic and geometric topology and homotopy theory. It will also be useful for students from other fields such as differential geometry, algebraic geometry, and homological algebra. The exposition in the text is clear; special cases are presented over complex general statements.

From reader reviews:

Miriam Ellis:

Now a day people who Living in the era wherever everything reachable by match the internet and the resources inside it can be true or not involve people to be aware of each details they get. How people have to be smart in having any information nowadays? Of course the answer is reading a book. Reading a book can help people out of this uncertainty Information particularly this Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) book as this book offers you rich data and knowledge. Of course the knowledge in this book hundred % guarantees there is no doubt in it you know.

Lois Jennings:

Do you have something that you prefer such as book? The e-book lovers usually prefer to pick book like comic, small story and the biggest the first is novel. Now, why not striving Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) that give your fun preference will be satisfied simply by reading this book. Reading behavior all over the world can be said as the method for people to know world better then how they react towards the world. It can't be explained constantly that reading behavior only for the geeky man or woman but for all of you who wants to be success person. So , for all of you who want to start examining as your good habit, it is possible to pick Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) become your starter.

Glory Ruiz:

In this time globalization it is important to someone to receive information. The information will make someone to understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You can view that now, a lot of publisher in which print many kinds of book. Often the book that recommended for your requirements is Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) this guide consist a lot of the information in the condition of this world now. This kind of book was represented how can the world has grown up. The terminology styles that writer require to explain it is easy to understand. Typically the writer made some research when he makes this book. This is why this book appropriate all of you.

Erin Wright:

Publication is one of source of understanding. We can add our expertise from it. Not only for students and also native or citizen need book to know the revise information of year to be able to year. As we know those ebooks have many advantages. Beside many of us add our knowledge, can also bring us to around the world. Through the book Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35) we can get more advantage. Don't you to definitely be creative people? Being creative person must choose to read a book. Just simply choose the best book that suited with your aim. Don't end up being doubt to change your

life at this time book Lecture Notes in Algebraic Topology (Graduate Studies in Mathematics, 35). You can more desirable than now.
