**Acoustic MIMO Signal Processing (Signals and Communication Technology)** Yiteng Huang, Jacob Benesty, Jingdong Chen

This book addresses a variety of acoustic signal processing problems under multiple-input multiple-output (MIMO) scenarios. The last decade has witnessed a growing interest in exploring these problems, but there has been little effort to develop a theory to have all these problems investigated in a unified framework. The authors begin by introducing an acoustic MIMO paradigm, and they offer a novel and penetrating analysis of acoustic applications. The book is a timely and important professional reference for researchers and practitioners from universities and a wide range of industries. It is also an excellent text for graduate students.
